******ColorCote

Atmospheric environments Usage Guide

Buildings with exposure to corrosive chemicals such as airports, gas stations, fertiliser or dairy factories may require the ColorCote® 'Plus' paint system to ensure roof or cladding is better protected from chemicals in the environment. Please contact ColorCote® for a recommendation if you are unsure which paint system is required.

These are general guidelines only. Building location, design & aspect need to be taken into account.

To ensure a warranty will be given, go online to colorcote.co.nz and complete a warranty enquiry form.
