

**Bulletin No.13** – Updated July 2025

### ColorCote® Metallic Paint Colours

The composition of these paint colours contains Mica which is the metallic flakes that gives these paints systems their reflective properties.

#### Where can it be recommended & specified?

Mild to Moderate Environments - ISO Categories C1–C3 or Zone A-C

#### Why is it limited to Mild to Moderate Environments?

Due to the composition of the paint containing Mica, the flakes can become corroded when exposed to very corrosive (salt & sea air) environments over time.

When the flakes become corroded, they are likely to pick off, causing the paint system to ultimately fail & expose the bare substrate causing eventual perforation.

It is therefore **NOT** recommended for use in Severe, Very Severe or Extremely Severe environments – Please refer to our Warranty Schedule for further info on ISO Categories or Zones.

#### Colour range available:

Metallic Silver & Metallic Gunmetal

(We highly recommend using our online ColorCote® Warranty Enquiry system at all times, but especially when Metallic paint considerations are involved to minimise any future risk with warranty performance & durability.
